Annual library subscription rate including postage and insurance (1978)

Rest of the World	**US $112.00**
UK & Eire	**£50.90**

Specially reduced rates to individuals: In the interests of maximizing the dissemination of the articles published in this important international journal we have established a two-tier price structure. Individuals whose institution takes out a library subscription, may purchase a second or additional subscription for their personal use at a much reduced rate. The subscription price of this publication for individuals whose organization already purchases the library subscription is US $30.00 per annum.

Reduced rates for students and members of the Society for International Development are available on request.

All subscription enquiries should be addressed to:

The Subscription Fulfilment Manager, Pergamon Press Ltd., Headington Hill Hall, Oxford OX3 0BW, U.K.

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means: electronic, electrostatic, magnetic tape, mechanical, photocopying, recording or otherwise, without permission in writing from the publishers.

NOTES TO CONTRIBUTORS

1. Two copies of any article or note should be submitted, in a form suitable for sending to the printer. Both copies must be typed on one side of the paper only, in double spacing. A third copy should be retained by the author.
2. Articles should be accompanied by a record of the author's name and affiliation, and by an abstract, not exceeding 100 words, giving a clear indication of the nature and range of results in the paper.
3. Broad divisions and section headings should be clearly marked in the text where appropriate. Any quotations should appear in single marks, with longer quotations (exceeding 40 words) appearing indented in the text.
4. Bibliographical references should be carefully checked. In the case of books these should be complete in respect of edition, place and date of publication, and name of publisher; and in the case of journal articles (where given), volume and issue number, month and year, and inclusive page numbers. References to privately circulated or mimeographed material should also contain the name of the appropriate department or institution concerned.
5. The full mathematical workings necessary for justifying each step of the argument should accompany all articles of a mathematical character in order to assist the referees. These workings will not be published.
6. Diagrams should be clearly drawn, with clearly marked axes. These should be submitted on separate sheets, and accompanied by the basic statistics required for their preparation.
7. Statistical tables should be submitted on separate sheets. These should be clearly headed and the reader should be able to understand the meaning of each row or column without hunting in the text for explanations of symbols, etc. Units of measurement, base-dates for index numbers, geographical area covered and sources should be clearly stated. Authors are fully responsible for the accuracy of the data and for checking their proofs, but whenever they feel that the referee would have difficulty in testing the derivation of their statistics, they should provide supplementary notes on the methods used, which will not be published.
8. The positions of diagrams and tables should be clearly marked in the text; these will be adhered to wherever practicable.
9. All footnotes, including authors' acknowledgements etc., should be submitted on a separate sheet. These will appear at the foot of each relevant page, but should be numbered consecutively throughout.
10. Authors are expected to correct proofs expeditiously and to keep alterations down to a very low level: the original typescript must be regarded as definitive and the publisher reserves the right to charge authors for excessive authors' corrections made in proof.
11. Because of the heavy pressure on space, the editor will give preference to articles which deal succinctly with an issue which is both important and clearly defined. In general, articles should not exceed 8 printed pages (some 8,000 words) unless there is special justification, e.g., a lot of essential tables or charts.
12. The editor particularly welcomes brief Notes—e.g., dealing with a single point or setting out the *results* of research (with an offer to supply readers with details of statistical procedures on request).
13. Twenty-five reprints are provided free of charge. Further copies may be purchased at a reasonable price if ordered on the form which will accompany the author's proofs.

Comments on published articles

Anyone wanting to submit comments on an article is asked to start by sending a copy to the author, inviting him to send the commentator his observations, and in particular to explain any points on which the commentator has misunderstood what the author was saying. The commentator is asked to allow the author a reasonable time to reply before he sends anything to the editor, and to enclose any reply which he may have received from the author. If the editor accepts the Comment for publication, he will send one copy to the original author and give him a chance to make a short Reply in the same issue.

AIMS, SCOPE AND PURPOSE OF WORLD DEVELOPMENT

Development

Development must be redefined as an attack on the chief evils in the world today: malnutrition, disease, illiteracy, slums and unemployment. Other issues also are in need of reappraisal and original analysis: relations between rich and poor countries, including direct foreign investment; the new shortages of food, energy and some raw materials; the impact of world inflation; relations between developing countries; the implications for the development efforts of the Third World of Western concern for the environment; repercussions of important economic and political developments, e.g., the expansion of the European Economic Community, the crises in the international monetary system, détente between the US and the USSR, the emergence of the People's Republic of China and the ascendancy of Japan and the oil producers. On these and related problems, contributions which offer new and imaginative insights are encouraged.

Science and technology

Many scientists and non-scientists have become increasingly convinced in recent years that science and technology have an essential role to play in economic development. WORLD DEVELOPMENT encourages, therefore, the publication of original articles and review papers which will help to stimulate and improve the development and application of appropriate science and technology in developing countries.

Social institutions

It is the purpose of this journal also to support the exploration of the forces making for international integration and disintegration and the presentation of new ideas of constructive co-operation with low-income countries. We therefore invite contributions which develop imaginative and constructive ideas for experiments and innovations in social and cultural institutions, standards and styles of life and work; which examine the scope and limits for the transfer of 'Western' institutions to the different societies of countries attempting to develop; and which compare the experiences of different economic and political systems, and in particular examine what lessons can be learned from the policies of centrally planned economies when applied to the development efforts of poor countries.

We believe that we can learn from one another and set a modest example of international co-operation through maintaining an international dialogue across the existing barriers between nations, disciplines, approaches and professions, and thereby contribute to the dismantling of these barriers.

The Journal of Libertarian Studies

AN INTERDISCIPLINARY REVIEW

Affiliated with The Center for Libertarian Studies, New York

Editor: **MURRAY N. ROTHBARD,** *Department of Social Sciences, Polytechnic Institute of New York*

A STATEMENT OF PURPOSE

In recent years, there has been an enormous growth in the extent and depth of libertarian scholarship, the study of human action which is germane to the concept of individual liberty. In many cases, the libertarian position is distinctly in the minority.

The Journal of Libertarian Studies has been founded not simply to provide an outlet for scholarship and research that may be unpopular in a particular discipline. It is the belief that there is a new and growing interdisciplinary discipline—libertarianism—enriched by contributions in each of the particular and seemingly isolated fields that study human action, which provides the motive for this Journal. Philosophy, political science, economics, history, law, sociology, geography, anthropology, education, and biology will be carried in this Journal.

Several annual Libertarian Scholars Conferences have already been held which generate numerous scholarly libertarian papers of high quality. Communication among libertarian scholars between, as well as within, the various relevant disciplines was thereby enriched.

By its existence as a regularly appearing publishing outlet, we hope to stimulate significant expansion in the research and production of scholarly libertarian material. We hope to intensify the development of the emerging discipline of libertarianism. Finally, we expect that the existence of the *Journal* will serve to multiply the number of libertarian scholars and to intensify communication among and cross-fertilization of them. Whether or not the scholar is personally a libertarian will be not a criterion for acceptance of a manuscript; rather, the criterion will be whether an article will advance the discipline of libertarianism, regardless of the personal beliefs of the author.
